STORMWATER MANAGEMENT

The Town is continuing to implement a Stormwater Management Program to improve water quality by reducing the discharge of pollutants from storm water runoff into local storm drains, rivers, ponds, streams and other receiving waterbodies. The following information is provided as part of the Public Education component.

ILLICIT DISCHARGE DETECTION AND ELIMINATION

What is an illicit discharge?

An illicit discharge is the discharge of pollutants or non-stormwater materials into a storm drain system via overland flow, direct dumping, or illegal connections. Illicit discharges may be a result of industrial activity, deposits of oil on parking lots, excess lawn fertilizer and yard clippings, and a variety of other sources which pollute water with turbidity, excess nutrients, and bacteria. Illicit discharges can also be from failing septic systems or improperly connected sewer lines. Dumping anything other than stormwater into a storm drain allows these pollutants to enter lakes and streams causing public health concerns, harm to wildlife, and unpleasant odors or color. Developing an illicit discharge detection and elimination program (IDDE) to find and eliminate these sources is mandated by the US EPA under the Municipal Separate Storm Sewer System (MS4) Permit.

Sources of Illicit Discharges

- Sanitary wastewater (sewage)
- Septic tank waste or overflows
- Car wash, laundry, and industrial wastewaters
- Improper disposal of auto and household toxics, such as motor oil, antifreeze, and pesticides
- Spills on roadways and other accidents

How can you help?

- Never dump anything down a storm drain.
- Dispose of yard and pet waste properly.
- Avoid excess use of pesticides and lawn fertilizers.
- Wash your car at a car wash facility.
- Make sure sanitary, laundry, carwash, and industrial wastewaters do not drain to the storm drain system.
- Have your septic tank pumped and inspected at least once every two years.

Contact the Engineering Dept. @ 978-623-8350 x520 to report any unusual storm drain flows that have a noticeable odor, discoloration, or oily sheen.
